

ClinIntell

The Only Data Driven Severity Documentation Mobile App for Providers

The power of ClinIntell's severity reporting insights and tools now accessible to providers across the country.

App Differentiators

Provider Performance

Get insight into your overall severity documentation performance and areas of improvement in clinical condition reporting for your unique patient population.

Provider Training

Boost your clinical documentation skills with tailored clinical condition training program, only possible with ClinIntell's advanced severity reporting analytics.

Severity Documentation and CDI 2.0

While CDI 1.0 relies predominantly on the query process to drive and sustain severity reporting performance. CDI 2.0 augments it with ClinIntell's population based analytical insights and an 80/20 provider focused approach.

These insights, based on your unique and ever-changing patient population, enable data-driven goal setting and provider performance improvement strategies with training.

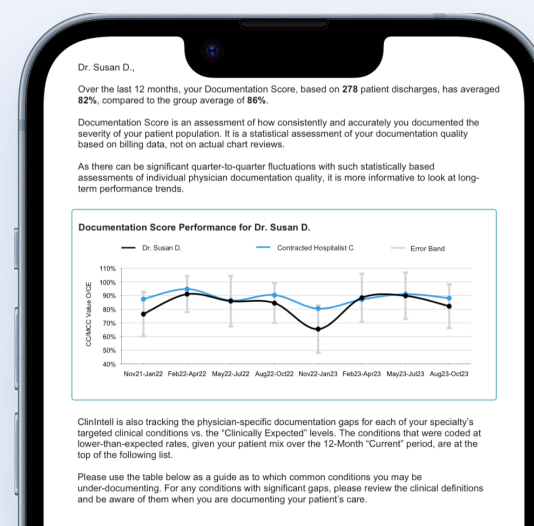

When providers master accurate documentation of high opportunity clinical conditions upfront, the results exceed those of CDI 1.0, leading to lasting improvements and a reduction in commonly occurring queries. Embrace a new era of provider driven documentation excellence!

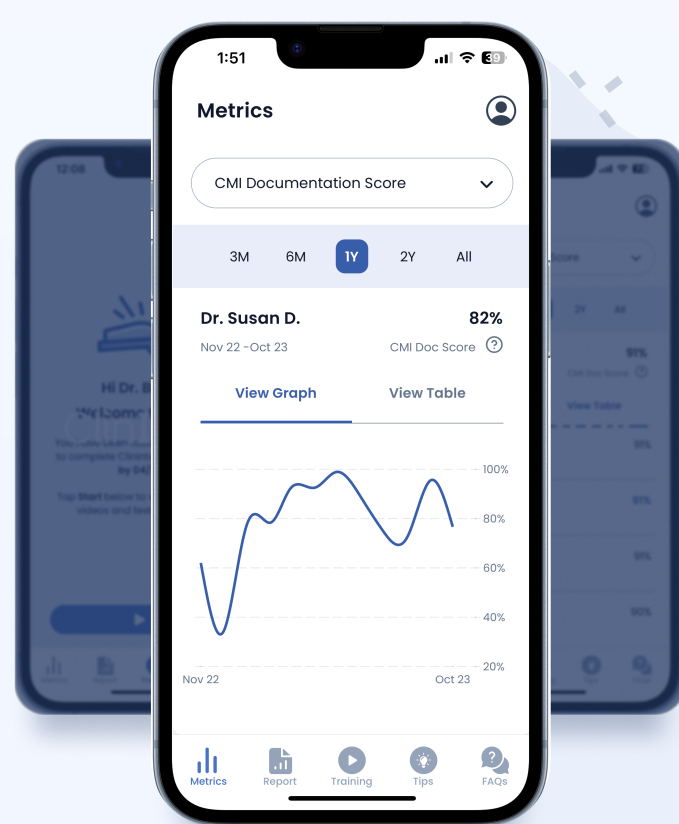

Provider Training:

- Individual provider performance metrics and clinical condition insights
- 2-4 minute severity documentation training videos per clinical condition
- Clinical vignettes and test your knowledge questions
- Severity Documentation Tips and Resources

Provider Reports:

- View and compare your performance relative to your group and peers
- Identify conditions that need improvement based on your unique patient population
- Additional documentation tips on clinical conditions where your peers are high performers versus your results

Experience the exclusive healthcare provider app that drives CDI 2.0!

At ClinIntell, we believe physicians play a pivotal role in the reporting of patient severity and will need accurate analytical insights and tools to drive meaningful and sustainable change.

Thus, we are thrilled to introduce the industry's only mobile app that provides physicians with exactly that and more – readily accessible at their fingertips.

Physicians are now more informed on their performance and can maintain optimal documentation practices using a data driven approach.
